## 说明/订购信息

TPD3F303 是一款用于 SIM 卡接口的三通道集成型 EMI 滤波器。 该器件集成了一个 $V_{CC}$ 箝位，用于在 $V_{CC}$ 线路上提供系统级的 ESD 保护。 在 CLK 线路上设有阻值为 47Ω 的终端电阻器，并在 DATA 和 RST 线路上采用了一个 100Ω 终端。

低通滤波器阵列降低了 EMI 辐射并提供了系统级的 ESD 保护。 凭借其小外形封装及易用型引脚配置，TPD3F303 滤波器可适合广泛的应用，例如：移动手机、 PDA、视频控制台、笔记本电脑等等。

TPD3F303 专为抑制那些容易遭受电磁干扰的系统中的 EMI/RFI 噪声而设计。 该滤波器系列内置一个 ESD 保护电路，用于防止应用在遭受远远超过 IEC 61000-4-2 (Level 4) 规格值的 ESD 应力时受损。 TPD3F303 的规定工作温度范围为－40°C 至 85°C。

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.
