

Features

- Low quiescent current : 0.2uA
- Wide input voltage range : 1.2V to 6.0V
- High output current : 500mA
- Low dropout voltage : 130mV at 100mA
- PSRR: 60dB/1kHz
- Fixed output voltages : 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, 3.6V.
- Output voltage tolerance : $\pm 2\%$
- Current limit protection
- Short circuit protection
- Thermal shutdown protection
- Available packages: SOT23-5,SOT89-3,DFN1 $\times$ 1

Applications

- Battery-powered equipment
- Smoke detector and sensor
- Micro controller applications
- Home appliance

Description

The WL9005H series is an ultra-small, low dropout (LDO) linear regulator that can source 500mA of output current. The WL9005H has fast response to input voltage transient and load current transient, and ensures no overshoot voltage during WL9005H startup and short circuit recovery.

The WL9005H series has thermal shutdown, current limit, and short circuit protections for added safety.

The WL9005H series contains eight fixed output voltages of 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, 3.6V.

Input Capacitor and Output Capacitor

A 1uF ceramic capacitor is recommended to connect between VIN and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both VIN and GND.

For the stability of LDO, an output capacitor is required. The recommended minimum output capacitance is 1 u F. It is recommended to use Ceramic capacitor with a temperature characteristic of X5R or X7R. A higher capacitance value helps to improve the transient response of the load/line. The output capacitance can be increased to maintain a lower down/overshoot. Place the output capacitor as close as possible to the VOUT and GND pins.

Current Limit and Short Circuit Protection

When output current at VOUT pin is higher than current limit threshold or the VOUT pin is direct short to GND, the current limit protection will be triggered and clamp the output current at a pre-designed level to prevent over-current and thermal damage.
